

# Netflix Data Visualization Project Proposal

**Project Proposal:** Data Visualization on Netflix Analysis

By: Himanshu Kumar

Internship Organization: Unified Mentor

## 1. Introduction

The goal of this project is to analyze and visualize data from Netflix to uncover content trends, growth patterns, genre distribution, and the people contributing to Netflix shows and movies. By building an interactive Tableau dashboard, the project aims to provide a user-friendly storytelling experience that will benefit a wide range of stakeholders.

The analysis will help answer questions like:

- How has the volume of content on Netflix changed over time?
- Which countries, genres, and categories are most popular?
- Who are the top actors and directors on the platform?

## 2. Objective

To design a data visualization dashboard using Tableau that enables:

- Trend analysis of Netflix content over the years
- Genre and country distribution breakdown
- Actor/director contribution patterns
- Insights into TV Shows vs. Movies and their release patterns

# Netflix Data Visualization Project Proposal

## 3. Stakeholders, Audience, and Subject Matter Experts (SMEs)

The dashboard insights are expected to be useful for:

- Content Strategy Teams: To identify content gaps and high-performing genres.
- Data Analysts: To track growth patterns and audience interests.
- Marketing Teams: For genre-wise targeting and campaign design.
- Product Teams: To enhance content recommendation systems.
- Academic/Internship Mentors: To assess data skills and dashboard creation ability.

## 4. Data Source

The dataset is taken from Netflix's open data (available on Kaggle or other sources), and it includes:

- Title, Type (Movie/TV Show)
- Release Year, Date Added
- Country, Duration, Genre (listed)
- Director and Cast names

## 5. Tools & Technologies

| Tool | Purpose |
|------|---------|
|------|---------|

|             |  |
|-------------|--|
| ----- ----- |  |
|-------------|--|

|         |                                      |
|---------|--------------------------------------|
| Tableau | Dashboard and visualization creation |
|---------|--------------------------------------|

|        |                                 |
|--------|---------------------------------|
| Python | Data cleaning and preprocessing |
|--------|---------------------------------|

|           |                   |
|-----------|-------------------|
| Excel/CSV | Raw data handling |
|-----------|-------------------|

## 6. Dashboard Features

The Tableau dashboard will include:

- Year-wise Release Trend Chart
- Top Countries Producing Netflix Content
- Most Popular Genres
- Top 10 Actors and Directors by Count
- Interactive Filters: Year, Country, Type, Genre
- Pie/Bar Charts to show content splits (TV Show vs Movie)

## 7. Expected Outcome

- A clean, interactive, and insightful Tableau dashboard
- Sharable GitHub repository with:
  - Cleaned data
  - Dashboard file (.twbx)
  - Project proposal (.pdf or .md)
  - ReadMe file
  - Python file(.pynb)

## 8. Conclusion

This project showcases practical skills in data analysis, visualization, and storytelling using real-world Netflix data. It will not only enhance personal learning but also contribute to internship evaluation by presenting a well-documented, insightful analysis.
